

# DUDLEY ILLUSION V

WITH  
**Vantage**  
concealed cistern

Specifically designed for wall hung pans, can be sited on a flat wall, in a corner or used within furniture.

## INSTALLATION INSTRUCTIONS

### 1. Set frame height .

To adjust height of frame slacken off bolts holding adjustable legs in frame (A) . Adjust the position of the legs so that the WC pan rim is 400mm above the floor level. Re-tighten the bolts clamping the legs into position. The feet can be rotated, into any position to suit installation, by using the screw at the foot of the leg. (B)

### 2. Fit wall straps to frame.

The wall straps (C) can be adjusted and used in any orientation dependant on the depth of installation required. Minimum depth is 150mm, maximum depth is 370mm. Once positioned attach firmly to the frame using the M8 bolts, nuts and washers provided.

### 3. Fixing to wall and floor.

Attach frame securely to wall and floor using the plugs, washers and hex head screws provided. See diagrams overleaf for corner fitting. It is the responsibility of the installer to ensure that these fixings in the wall and floor are strong enough to adequately support the load which will be applied to the pan in use. It is recommended that fixings are as close as possible to the horizontal part of the brackets.

### 4. Fitting flushpipe.

Push the flushpipe onto the spigot of the Vantage cistern and secure in place using clamp (D) . Cut to required length.

### 5. Fitting pan connector.

Fit a pan connector or soil pipe to clamp (E) and position to suit the pan being fitted. When in the correct position, complete plumbing to the soil piping.

### 6. Fitting Partition.

Fit Partition/Wall/Furniture prior to fitting Pan.

### 7. Fitting pan.

Ensure M12 allthread protrudes sufficiently for correct and secure installation of the pan. See fig. 1 for installation detail.

### Notes -

- Pan outlet connector and soil pipe seal to be purchased separately. Required diameter 110mm
